Her self-reported scores were indeed at the highest level of need support. The term "visually impaired" is used to describe a student who has a visual impairment severe enough to interfere with learning. Clinical predictors of low-vision reading speed.

This site uses cookies to improve your experience. Still, there are children. In the second pilot study, the questionnaire was completed by a blind person and a person with visual loss. The simplest answer to this question would be that teacher and student scores are generally very close, but teachers are somewhat more positive about their need-supportive behavior than their students.

This will help make their daily routines a little safer and day-to-day tasks are some guides for successfully teaching visually and hearing impaired students in regular classroom settings.
