CFFI provides a simple to use mechanism for interfacing with C from both CPython and PyPy. It supports two modes: an inline ABI compatibility mode (example).

1. Extending Python with C or C++ – Python documentation

Throughout, we'll seek to abstract out manual effort required by the C implementation, delegating that work to Haskell to make the interface more robust, yielding.

Chapter 19 Interfacing C with OCaml

To interface with data types declared in a C application, you specify the Convention aspect on the corresponding Ada type declaration. In the following example.

An alternative strategy is called automatic garbage collection. We are going to package some OCaml functions in such a way that they can be linked with C code and called from C just like any C functions.

The other function, to be used in conjunction with the native-code compiler.

When interfacing with native code, there are usually two use-cases that come up: . D is designed to fit comfortably with a C compiler for the target .

The compilation of an extension module depends on its intended use as well as on the code autogenerated?
