**Are all stars the same? (Beginner) - Curious About Astronomy?
Ask an Astronomer**

Do different stars have different physical features on them or are they basically the same? Stars are not boring objects with the same physical.

These Stars Are All The Same: A Survey of Constellations by David J. Keffer

The SUN is also a star, but because it is relatively close to Earth, we can see a disc. How do all stars (and indeed planets) appear to be the same size to the during the night we should have been able to see them isn't it?.

Paths of the Stars - The Rotating Sky - NAAP

The flat-Earthers do not deny that the stars appear to move. That would be silly because we can all see them doing so, but instead they assert.

Ancient sky watchers imagined that prominent arrangements of stars formed patterns, and they associated these with particular aspects of nature or their myths. In massive stars, heavier elements can also be burned in a contracting core through the neon-burning process and oxygen-burning process. Mainarticles: ApparentmagnitudeandAbsolutemagnitude. Clustersareals
As a family, they enjoy hiking through the local mountains and are always on the look out for poison pie and other ambivalent mushrooms that dot the landscape. These have been found at the centre of galaxies.
For smaller stars, the core becomes a Neutron Star. It is within the photosphere that sun spots regions of lower than average temperature, appear. There are no green stars.
