Ensembl Plants is a genome-centric portal for plant species of scientific interest. About two-thirds of the global barley crop is used for animal feed, while the making it a natural model for the genetics and genomics of the Triticeae tribe, in seven chromosomes, it is one of the largest diploid genomes sequenced to date.

To estimate the correct Newbler parameterisation two simulation experiments were applied: i simulation of an whole-genome sequencing experiment for a diploid reference genome of similar genome size and repeat and gene composition and ii an in silico generation of an hexaploid gene set with similar sequence differences as in the homeologous genes of the target species.
