While frequency does effect one's perception of the loudness of a sound, it does not effect the intensity of a sound wave. It can continue to radiate through 80 Hz or 90 Hz or even higher depending on how sharp the crossover rolls off the higher frequencies. This is literally the best filtering possible. EmailBeckyOskinorfollowerherbeckyoskin.RefbaksareOff. Indeed, for most attendees the differences were difficult to hear. When testing his speaker for power And without regard for the hour He plugged it in the wall And caused plaster to fall And most of the neighbors to cower A tube nut by the name of Glen When asked of his divorce from Gwen Said "a matched set of tubes Is better than boobs Or at least I thought it was . UpNext.The fundamental and each of these harmonics can be thought of as a pure tone or what is called a sine wave. This is despite that an amplifier can have flat frequency response and extremely low harmonic and intermodulation distortion.
