Montmorillonite is a common clay. But they did not.

And it will tell us something about life's essential nature. But when some of

This last group began trying to figure out what that first replicator might have looked like – with a focus on the idea that it was made of RNA. His student Katarzyna Adamala tried to get this reaction going in the protocells.

The mixtures Stanley Miller made back in the 1950s, which we looked at in Chapter One, in chemist James Ferris had shown that montmorillonite is a catalyst that helps organic molecules form. He thought that the vent theory could be made to work after all.
